

GUIA TRAINING ON USB KEY

The USB Training key is used to train pilots in office on how to operate a Guia system by using an office computer. The office computer can be a laptop or personal computer (PC). This computer must have a USB port.

To run the Guia Training, do the following:

1. Turn off computer.
2. Plug in the USB Training key.
3. Turn on computer.
4. The computer should boot on the USB key. After booting, the Guia Main Menu should be shown on screen. Now you can use the keyboard to operate the system just like you run the Guia. For the operation keys, use:

<u>Keyboard</u>	<u>GUIA</u>
<F1>	<I>
<F2>	<II>
<F3>	<III>
<F4>	<IIII>
<ESC>	<0>
<Enter>	<Ent>

When flying the aircraft, use the arrow keys on keyboard:

<Up>	Increase speed
<Down>	Decrease speed
<Left>	Turn left
<Right>	Turn right

To turn spray on/off, press the “s” key on keyboard. You don’t have to hold the “s” key. Just press it once to turn spray on and once to turn spray off.

Note: Please use the USB Training key for Guia training only. The Training software runs on the USB key. Nothing is saved to your computer. Do not try to copy any files from your computer to USB key and any files from USB key to your computer. It won’t work.

When you finish learning, select “Shut Down” to exit. Wait until the computer is powered off; or a warning is shown that it’s safe to turn off computer.

Do not turn off computer when you run the Training or when on the Main Menu.

After computer is powered off, you can unplug the USB Training key.

If your computer does not boot up from a USB key, try the following:

1. Turn off computer.
2. Turn on computer.
3. When power is on, quickly press F2 or F12 (in some special cases, you may try "DEL") to start BIOS setup.
4. Go to BIOS Setup menu.
5. Find the "Boot" option, then press <Enter>.
6. Change the boot sequence to make "USB" or "USB HD" or "Removable Hard Drive" boot option in first place.
7. Save and exit.
8. Plug in USB Training key.
9. Restart computer.
